

**CLAIM AMENDMENTS**

Claims 21-38 are new and pending; and claims 1-20 are canceled.

1-20 (Canceled)

1           21. (New) A file list display apparatus, comprising:

2           an input unit for inputting a display command for displaying a sub-list having a  
3           predetermined number of files selected in an entire list of the files recorded in a recording medium;

4           a display unit for displaying the sub-list; and

5           a controller for creating one or more sub-lists from the entire list, each sub-list being different  
6           from the other sub-lists, and controlling the display unit to successively display each of the sub-lists  
7           different from each other through the display unit whenever the display command is input through  
8           the input unit;

9           wherein the controller groups the files successively listed in the entire file list by the  
10          predetermined number of files, and selects one file from each of the grouped files to create the one  
11          or more sub-lists having the selected files.

1           22. (New) The file list display apparatus according to claim 21, wherein the display  
2           command comprises:

3           a forward display command for successively displaying the respective files forming the  
4           sub-lists according to a forward list order of the files; and

4 with respect to all the deflection modes.

1 Claim 26.<sup>27</sup> (Canceled)

1 Claim 27. (Canceled)

5 a backward display command for successively displaying the respective files forming the  
6 sub-lists according to a backward list order of the files.

1 23. (New) The file list display apparatus according to claim 22, wherein the input unit is a  
2 manipulation panel having a plurality of manipulation buttons for inputting the display command.

1 24. (New) The file list display apparatus according to claim 23, wherein the display  
2 command is input by a combination of no more than two of the manipulation buttons.

1 25. (New) The file list display apparatus according to claim 24, wherein  
2 the manipulation buttons include a forward skip button, a backward skip button and a mode  
3 set-up button, and

4 the forward display command is input by a combination of the forward skip button and the  
5 mode set-up button, and the backward display command is input by a combination of the backward  
6 skip button and the mode set-up button.

1 26. (New) The file list display apparatus according to claim 25, wherein  
2 the forward skip button is a button for inputting an update command for updating one of the  
3 files in the sub-list according to the forward list order, and

4 the backward skip button is a button for inputting an update command for updating one of  
5 the files in the sub-list according to the backward list order.
